CSE 2200

Advanced Programming

*Lab test on **JSON Parsing**   **Set A**

Time: 1 hour 40 minutes   **Marks: 15**

1. Access and parse the **JSON** data of 3 Bangladeshi Telecom companies from the following link:
   https://api.myjson.online/v1/records/53b4282e-3ea7-4c05-b9b2-b9825c0c91f0

2. Create 3 **Pages** in your app in following order
   (Company -> People -> **Address**)

   2

   - There will be 1 **input** text field and 1 **button** in the first page. Input from the user will be the name of the company. (you can have it case sensitive)

   7

   - If you click on the button, it will show the **list** of **names** of the people working for the company given as input.

   6

   - If you click a particular name of the list, it will show his individual **address** within a single textview object.
